

## TARGET GROUPS

### ▶ MOBILE SCHOOL LEAVERS AND APPRENTICES

By providing fundamental information as to duration, contents, costs, but also the graduation of educational trainings, further qualification and potential employers in the neighbouring country useful decision support can be given and perspectives for development can be illustrated. Moreover, problems with the recognition of educations in the neighbouring country can be identified at an early stage and can be pondered or corrected in the run-up to career decisions.

### ▶ REGIONAL EMPLOYERS/ENTERPRISES

The online-portal provides information about qualifications (contents, key course elements, type of education and duration) on the recruitment of specialists and about regional further training. Additionally, by comparing foreign to domestic qualifications, it advances information about the potential of skilled workers in the neighbouring country, required by companies with a large supra-regional labour demand. To summarize, the project combines necessary information for employers on the recruitment of foreign specialists.

### ▶ REGIONAL AUTHORITIES AND INFORMATION OFFICES

The project offers the possibility for a target group specialised matching of domestic and foreign degrees in order to place workers and job seekers in appropriate jobs. The portal comprises important information about contact persons in regional employment services, associations, education institutions or ministries. Therefore, it constitutes a time-saving and efficient instrument for job matching and reduces the operating expense of offices and authorities.
